

Homeland Security

Among its many roles and missions, Homeland Security heads a concerted national effort to prevent terrorist attacks within the United States and reduce America's vulnerability to terrorism. Within this course of action is the challenge of protecting those who protect the general populace.

In an effort to support homeland security initiatives, Ceradyne has recently developed a DEFENDER® product line of lifesaving protective armor equipment for the members of homeland security agencies and organizations. The search for lighter weight armor products that offer a higher degree of protection is a Ceradyne hallmark.

United States Coast Guard (USCG)

The USCG has a broad and important role in homeland security and law enforcement, as well as in maritime law and mariner assistance. In all of these roles, protective armor and equipment is vital to the safety of its members, whether it be modular boat armor or personal body armor, Ceradyne's DEFENDER® armor saves lives by providing the highest ballistic protection.

Customs and Border Protection (CBP)

While the priority is to keep terrorists and their weapons out of the United States, this agency is also responsible for enforcing immigration regulations and drug laws. Ceradyne has committed resources to design and develop ceramic based armor solutions from body armor to government tested and approved vehicle armor in support of the CBP.

Federal Bureau of Investigation (FBI)

The FBI serves as both a federal criminal investigative body and an internal intelligence agency. Because their agents protect and defend the United States against terrorist and foreign intelligence threats, they are constantly in harms way. From armored cars to protective body armor, Ceradyne DEFENDER® ballistic products protect against the most lethal attacks.

Law Enforcement

By offering the most advanced ballistic protection, Ceradyne's intention is to provide the highest quality armor to those who protect our safety and freedom within the United States. Be it the Police or the Sheriff's Department or Public Safety, Ceradyne protective gear and armored vehicles deliver exceptional multi-hit protection against armor piercing and sniper ammunition.

Homeland Security

Secret Service

While the U.S. Secret Service falls under the U.S. Department of Homeland Security, the agents are primarily responsible for safeguarding the nation's financial infrastructure and protecting national leaders. As we know from history, this can be a deadly responsibility and one that requires the most advanced ballistic protection. Ceradyne vehicle armor and personal armor can be vital to survival.
